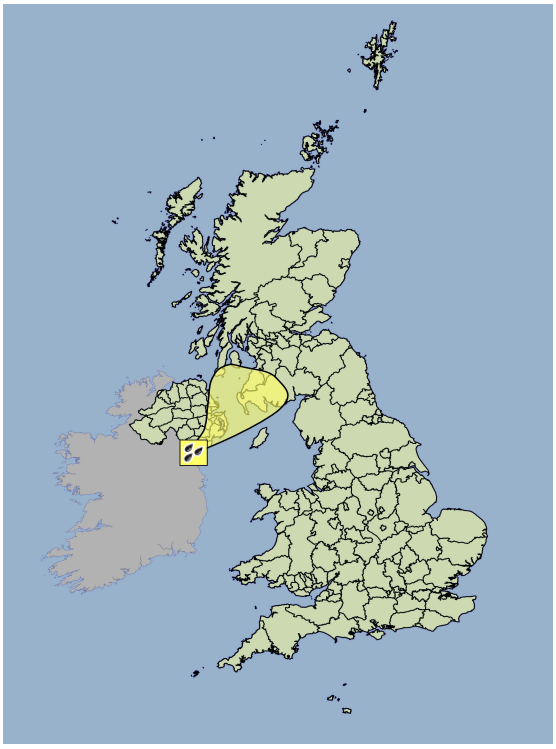
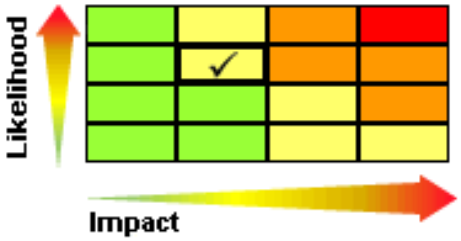
National Severe Weather Warning Service





Chief Forecasters Assessment
A shallow low pressure area will move northeast across the area this afternoon. The rain associated with this low will contain some heavy bursts, which could bring around 10 mm locally within an hour, and perhaps more than 30 mm within 6 hours.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **11:45 on Sat, 08th Nov 2014** until **20:00 on Sat, 08th Nov 2014**

Outbreaks of rain spreading from the south later on Saturday morning will turn heavy in places, first across eastern fringes of Northern Ireland and then across parts of southwest Scotland, before clearing away eastwards this evening. This brings possible surface water flooding, this risk enhanced by the recent wet weather in these areas, and possibly also by leaves blocking drains.

The public should be aware of the risk of some minor disruption to travel.
